

Richard Gober

Anthracite Heritage Week

Business and Computer Technology Lesson Plan

Objective: To have students design and build a web page honoring local people involved in the coal mining industry.

Procedure: Involve several classes in the construction of the final web page project. The students will select several people from a list of parents, relatives, friends, or neighbors who have been involved in the coal mining industry to base the web page on.

Web Design class will be responsible for the overall design, layout, and construction of the web page.

Computer Application class will be responsible for content research about the people selected and formatting the information including any related graphics.

Keyboarding class will be responsible for keying text files to be input into the web page.
